Rotation for safety

More legroom and the exit option in both seating directions enable even safer and more efficient application of the machine. Up to 9 tons of payload not only offers plenty of material handling per trip, but is also optionally supported by a power engine, which noticeably increases the tractive force and power. Additional safety features include: hill-hold function, seat belt monitoring and many other highlights.

Swiveling operator's seat with legroom

The new rotating seat offers extensive legroom and space for the operator. The operator can move freely and can still turn the seat while sitting, without restrictions.

Seat belt monitoring with start release

The seat belt monitoring system signals visually and acoustically if an attempt is made to start the machine when the operator is not wearing a seat belt. The additional start release prevents start-up in this case.

Fold-down armrest for entry and exit from both sides

The right armrest of the control panel, including the joystick, can be folded up and down. It thus allows entry and exit from both sides, even when the seat is turned towards the skip. This saves valuable time for the operator, so that he does not have to turn the seat again after loading to get out.

| Motor type | | Diesel engine |
| Fuel type | | Diesel EN 590 |
| Exhaust-gas limit | | EU Stage V |

Hill-Hold function

The integrated hill-hold function prevents the machine from rolling back when at standstill, as soon as the foot is taken off the gas pedal. The machine brakes automatically against rolling back.
