

**WACKER
NEUSON**
all it takes!

Compaction

Rammers, vibratory plates and rollers

Wacker Neuson – all it takes!

Invest in the future.

Set your sights on high-quality machines and equipment with Wacker Neuson, which you can rely on for decades - with a consistently high resale value. With over 175 years' history, we are building on a strong foundation and are proud of innovations, which have revolutionized the entire industry. Innovation is in our DNA - benefit from this and ready yourself for the future.

Rely on a partnership of equal footing, very close by.

Our global network of sales and service stations makes Wacker Neuson a partner with whom you can collaborate on-site on equal footing. We are here to listen to you, to understand you and to solve your problems with you. Set yourself up with a strong partner by your side, who can help you to position yourself ahead of the competition.

Bring even more efficiency to your construction site!

Wacker Neuson ensures a maximization in productivity and a minimization in costs - with high-quality products, reliable solutions and support, which guarantees the smooth operation of a construction site at any time.

Battery-powered rammers.

Working in poorly ventilated environments and trenches is not a problem with zero emission battery-powered rammers, because they do not cause direct exhaust emissions. Also, our battery-powered rammers can be started very easily at the push of a button – it doesn't get anymore comfortable. However, you need not forgo performance, because the battery-powered rammer provides the same performance as its petrol-driven equivalent.

Performance

- Active cooling for optimal temperature management and performance capability, even when the ambient temperature is high
- The battery standby mode makes the starting procedure easier
- Optional: speed control
- It is possible to optimally adapt the percussion rate to different ground conditions
- Sensitive operation along from path delimiters

Efficiency

- Low energy costs and thus high savings over the long service life
- The Battery One battery can also be used for all other battery-powered construction equipment from Wacker Neuson (more on page 12)
- The battery can be replaced with a few simple steps

AS62e

AS30e

AS68e

Operator-friendliness

- The operator is not exposed to any exhaust emissions
- Therefore, the battery-powered rammers can be used without restrictions in trenches, tunnels and interior spaces

Comfort

- The angled guide handles provide an ergonomic feel

Maintenance

- Thanks to the electric motor, maintenance work is completely eliminated

Healthier work; the operator is not exposed to direct exhaust emissions.

Battery One app - Information on battery usage, battery status, and software updates comfortably via a smartphone.

Starting at the push of a button – comfortably without a cable pull and at any outside temperature.

Max. percussion rate (rpm)	820	680	680
Type of drive	Electric motor	Electric motor	Electric motor

2-stroke rammer.

Vibratory rammers with 2-stroke engines are only available from Wacker Neuson. The powerful and self-developed engine WM80c is perfectly adapted to the requirements of vibratory rammers. For productive work and excellent results.

Performance

- Optimized cooling air flow for performance even at high outside temperatures
- Efficient air filter for consistently high engine output

Efficiency

- Engine can be started without problems even after side position
- Strong work performance due to large stroke, combined with high impact energy, high ramming frequency and fast forward travel
- Sturdy engine developed specifically for vibratory rammers makes maintenance easy and saves spare parts costs

Comfort

- Narrow, compact design with optimum machine center of gravity facilitates maneuvering.
- Angled guide handle provides ergonomic grip and relieves strain on the wrists

Environmental-friendliness

- Very low CO emissions (carbon monoxide), thus unproblematic application in trenches

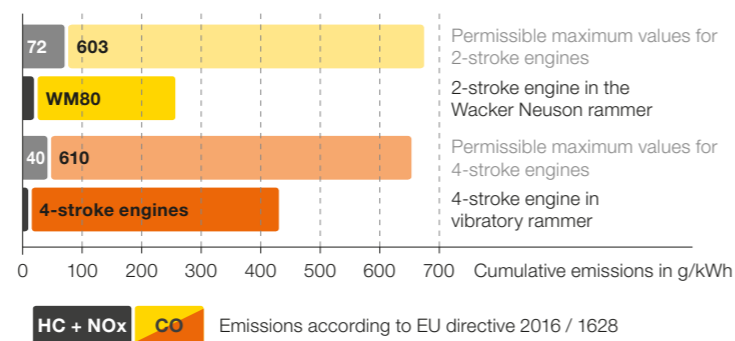

Transport

- Large, flexible lifting eye
- Transport rollers on the handle for easy pushing onto the truck bed

	BS30	BS62-2	BS68-2
Operating weight (kg)	30	58	64

Clean working: A catalytic converter is installed as standard—only Wacker Neuson offers this.

Emission values of gasoline rammers

The carry handle on the ramming shoe sits well in the hand as a result of the rounded-off edges, which makes transportation simple.

As a result of the fuel filter being within view of the operator, it means that it is easy to check the fuel flow.

BS30 – The specialist for narrow trench applications and pipe gusset compaction.

4-stroke rammer.

The work performance of the 4-stroke rammers impresses every day. Well thought-out functions make the use of the equipment even more comfortable, extend their long service life and minimize maintenance.

Performance

- High compaction performance thanks to long stroke and high impact force
- Efficient air filter for consistently high engine output

Comfort

- Just one lever for starting, idling and stopping; with integrated fuel cock
- LED oil level warning display
- The specially spring-mounted guide handle reduces hand-arm vibrations (HAV)
- The angled shape of the guide handle ensures an ergonomic gripping position

Efficiency

- The fast travel speed allows efficient working with high surface performance

Maintenance

- Honda is represented internationally as an engine manufacturer. So spare parts are available quickly

BS62-4

Diesel rammer.

The DS70 is a well-balanced machine with compact dimensions and low CO₂-emission. Therefore, it is also well suited for compaction work in trenches. The DS70 offers strong performance for the compaction of cohesive, mixed and granular soils.

Comfort

- Just one lever for starting, idling and stopping; with integrated fuel cock
- Very large tank for long, uninterrupted work
- No need for a second fuel on the construction site

Efficiency

- Time and costs can be saved due to the high compaction performance

DS70

EQUIPTRACK

- EquipTrack enables the complete and precise collection of operational data via a Bluetooth module for more efficient and more transparent processes on the construction site.
- EquipTrack can be easily installed on the device, and retrofitting is also possible without any problems.
- The collected operating costs can be read via the smartphone app.

Battery One – One battery for all people and purposes.

Three battery versions – BOB5, BOB10, BOB14.

With the Battery One batteries, you can power a variety of construction equipment – regardless of manufacturer.

- Specially developed for tough application on the construction site
- Complete all the tasks of a typical workday with just one battery charge
- Battery is changed without tools and in just a few easy steps

Charging and transport solutions

With the Battery One battery chargers, your battery will be ready for use again in a short time. With the quick battery charger after just a maximum of 140 minutes of charging time.

Battery One also offers practical Systainer brand transport and charging boxes.

BATTERYONE

Battery-powered, single-direction vibratory plates.

The battery-powered single-direction vibratory plates by Wacker Neuson work completely emission-free and are thus suited for many sensitive areas of application. These can do everything that a normal vibratory plate can do: compacting soils, vibrating paving stones and - with optional water tank - compacting asphalt.

Performance

- Battery charge is sufficient for the typical work of a full day
- Consistent performance over the entire discharge phase of the battery

Transport

- The guide handle can be collapsed, which enables very compact transport and storage dimensions

Efficiency

- **DIREX**: Unique direct drive without V-belts offers efficient performance and long battery running time
- Low energy costs due to charging with electricity
- The Battery One battery can also be used for all other battery-powered construction equipment from Wacker Neuson (more on page 11)

	AP2560e
Operating weight (kg)	143
Range per battery charge BOB10 ² (m ²)	307
Range per battery charge BOB14 ² (m ²)	528

With its high speed and wide base plate, the AP2560e is ideal for vibrating large paved surfaces.

No exhaust emissions, protects operators and the environment, and opens up new areas of application.

Starting at the push of a button – comfortably without a cable pull and at any outside temperature.

The APS series.

The APS-series is characterized by its excellent driving features. The guide rail reacts to steering movements, while simultaneously reducing the hand-arm vibrations to the best-possible extent. Turning and steering movements are transferred very easily to the machine. Cleaner finishes at curbs are easy to produce due to the angular side edges of the base plate.

Unique direct drive without V-belts offers efficient performance and long battery running time compared with the battery-powered equipment of other manufacturers

APS1135e

Maintenance

- Maintenance-free electric motor without V-belt

Comfort

- The battery can be removed without tools in a few simple steps
- The low hand-arm vibration (HAV) values (< 5 m/s²) enable comfortable work

Quality

- Base plate made of extremely sturdy nodular cast iron and sturdy bearings for a long service life

¹ Water tank model plus 5 kg
² Depends on the soil and environmental influences

Single-direction vibratory plates.

These vibratory plates are at home on asphalt and soil. With the BPS- and DPS-series, you not only work comfortably, but also efficiently and economically. They are optimally suited for processing surface and subbases. They were designed for tough, long-term application on the construction site. The engines equipped with large power reserves, as well as the maintenance-free and durable exciter bearings, contribute to this. The easy to reach throttle lever and vibration damped guide handle offer a high degree of operating comfort.

Comfort

- Large lifting eye, usable as a guiding aid
- The guide handle responds clearly to steering movements
- Low HAV, for greater working comfort
- When the wheel set is folded down, the guide handle locks automatically. Conversely, the guide handle is automatically unlocked when you fold up the wheel set
- Paving pad is hooked into the base plate at the front and tightened with nuts

Quality

- Permanently lubricated cylindrical roller bearings
- Wear-resistant base plate made of nodular cast iron (GJS 700)

Transport

- Forward-swiveling guide handle offers compact transport and storage dimensions
- Lift handle at the front of the base plate is wide enough for two hands

Efficiency

- The water tank with hinged lid is firmly mounted on the machine
- The large water tank (9 liters) enables long periods of uninterrupted work

The paving pad (accessories) protects sensitive paved surfaces when vibrating. With only two bolts, it can be quickly fastened to the machine.

The wheel set (accessories) can be mounted easily. When folded down, the guide handle is automatically locked, and when folded up, released again.

¹ Water tank model plus 5 kg

Single-direction vibratory plates.

The single-direction vibratory plates of WP-series can manage in any narrow space and are thus particularly suitable for small areas. Thanks to the centrally affixed guide rail, they are easy to maneuver and particularly agile.

Efficiency

- The high travel speed ensures high productivity
- Sturdy design for effective long-term application
- Full width sprinkling without wasting water

Comfort

- Centered attachment of the guide handle for effortless turning
- Water tank with hinged lid and large rotary knob to regulate the amount of water

Maintenance

- Particularly wear-resistant V-belt, protected from damage by housing. Easy re-tightening possible
- Lifelong lubricated ball bearings
- WP1550e: Maintenance-free electric motor without V-belt

WP1550

DIREX

Unique direct drive without V-belts offers efficient performance and long battery running time compared with the battery-powered equipment of other manufacturers

Quality

- The sturdy protective frame protects the engine and water tank from damage
- The rounded edges minimize the formation of stressed edges when turning the vibratory plate
- Base plate made of nodular cast iron (GJS700)
- Sturdy design for long-term application

Transport

- Wheel set available as accessory

Efficiency

- The Battery One battery can also be used for all other battery-powered construction equipment from Wacker Neuson (more on page 11)

WP1550e

The large water tank holds 12.5l and allows long work applications without refilling.

The tubular frame with integrated lifting eye can also be used laterally as a control handle, ideal for compaction along edges.

Low hand-arm vibration (HAV) values (< 5 m/s²) for working comfort even during prolonged application of the WP1550.

	WP1550	WP1550e
Performance (kN)	15	15
Weight (kg)	90-98	83-91
Engine type / drive system	Gasoline engine	Electric motor / DireX

Reversible vibratory plate with battery drive.

The battery-powered reversible vibratory plates of the APU series are a technological milestone: as the first reversible vibratory plates worldwide, they are equipped with a direct drive without V-belts and therefore provide high compaction efficiency and complete freedom from maintenance. The emission-free drive and the low overall height make it the ideal compaction equipment for shoring in trenches.

Unique direct drive without V-belts offers efficient performance and long battery running time compared with the battery-powered equipment of other manufacturers

APU2850e

Performance

- Consistent power output over the entire battery running time

Quality

- All-round protection due to steel cover
- Battery developed by Wacker Neuson
- Vibratory plate made of extremely sturdy, wear resistant materials
- Base plate made of nodular cast iron (GJS700)

Comfort

- Starts with a push of a button
- Intuitive guide handle with variable speed and direction change simply by turning it over
- Durable, self-engaging center pole lock for quick and reliable transport securing
- Low HAV (< 2.5 m/s²)

Environmental-friendliness

- Because the machines are emission-free, new applications open up in areas with special requirements

Efficiency

- Lowest overall height for application in trench shoring
- Battery can be changed quickly and without tools
- Lifting eye suitable for different lifting tackles
- Integrated wheel set

Maintenance

- Motor mounted directly on the base plate without V-belt - no maintenance required

The operator can easily access the switch on the center pole.

With one battery charge, the APU3050e compacts up to 333 m² soil*.

Battery change in just a few, quick steps.

Lightweight reversible vibratory plates.

More operating comfort due to the forward and reverse travel direction combined with a compact design – that is what the small reversible vibratory plates from Wacker Neuson offer you. A finely coordinated portfolio offers the right model for every requirement.

Performance

- Rounded edges minimize the formation of stressed edges when turning the vibratory plate

Efficiency

- Sturdy transport roller with a wide contact surface prevents tracks in fresh asphalt
- Sprinkler system for optimal water distribution across the entire width of the base plate

Quality

- Sturdy protective frame for engine and water tank
- Base plate made of high-quality nodular cast iron: for long service life
- Base plate rounded edges for easy turning on asphalt, without scarifying

WPU1550

Very easy to maneuver: thanks to the specially shaped base plate of the WPU1550.

WPU1550

Performance (kN)	15
Weight (kg)	101 – 103
Engine type	Gasoline engine

DPU series

Efficiency

- Compact dimensions, high performance
- Integrated wheel set
- High surface performance through fast advance travel
- Lifting eye can be folded, thus the vibratory plate achieves compact dimensions and can be guided more easily, for example, under low obstructions
- Widths from 40 to 70 cm available

Maintenance

- Very good accessibility to all maintenance points

Comfort

- The height of the center pole is easily adjustable
- Intuitive guide handle with variable speed adjustment
- Electric starter is available as an option for the DPU3050, DPU3060, DPU3750 and DPU3760
- Integrated wheel set: maintenance-free and sturdy – even in the toughest conditions

Quality

- The vibratory plate is made of extremely sturdy, wear resistant materials
- Base plate made of nodular cast iron (GJS700)

Top-Speed-Version: for high surface performance in laying paving stone.

	DPU 2540*	DPU 2550	DPU 2560	DPU 3050*	DPU 3060*	DPU 3070*	DPU 3750*	DPU 3760

Engine type	Diesel engine							

* Models optionally also available with gasoline engine (BPU)

New model series: medium-weight reversible vibratory plates 300 – 600 kg.

The medium-weight vibratory plates combine a high forward-moving and reverse speed with excellent compaction performance for efficient and precise compaction of different ground types and structures. The modern, ergonomic user surface therefore ensures a high level of operating comfort.

DPU series

Efficiency

- Optimal forward-movement and reverse travel speed and high level of compaction performance
- Versatile application areas due to 69 Hz exciter frequency

Quality

- Base plate made of sturdy nodular cast iron (GJS700)
- Automatic adjustment coupling

Performance

- Optional: digital machine control with Bluetooth connectivity via the smartphone app, onboard machine diagnostics, Compatec display, and Compamatic for compaction documentation via EquipCare

Comfort

- Low HAV (< 2.5 m/s²)
- Height adjustable center pole
- Variable forward and reverse speed
- Ergonomic gas lever with integrated start function
- Hydraulic travel direction control

Maintenance

- Easy cleaning due to open base plate
- Large maintenance covers for easy access to the maintenance points

The ergonomic gas lever is well protected in the middle of the guide rail.

The compaction control Compatec supports daily work. With the optional Compamatic, compaction progress can be documented from a desk both comprehensively and fully.

The hand-arm vibrations (HAV) are below 2.5 m/s² thanks to the vibration-reduced center pole, as a result the need for documentation lapses.

	DPU5247, DPU5260*, DPU5275	DPU6247, DPU6260, DPU6275*
Performance (kN)	52	62
Weight (kg)	403 – 450	473 – 505
Engine type	Diesel engine	

* Models optionally also available with gasoline engine (BPU)

Medium-weight reversible vibratory plates 300 – 600 kg.

The medium-weight reversible vibratory plates offer high productivity as a result of its high compaction force in combination with fast forward and reverse travel speeds. They are the all-rounders for all construction sites where high demands are placed on the performance efficiency of a unit. In addition, they offer excellent characteristics in terms of long service life and operating comfort.

DPU series

Efficiency

- Compact dimensions, high performance
- High surface performance through fast advance travel
- With an exciter frequency of 69 Hz, the vibratory plate is universally deployable for various construction processes

Quality

- Base plate made of nodular cast iron (GJS700)
- The sturdy pipe frame offers all-around reliable protection of the engine

Comfort

- Low HAV (< 2.5 m/s²)
- The height of the center pole is easily adjustable
- The sturdy, self-engaging center pole lock offers a very fast and reliable retainer for transport
- Intuitive guide handle with variable speed adjustment

Maintenance

- Very good accessibility to all maintenance points
- If the battery is discharged, the machine can be jump-started very quickly via a removable pin

Safe in every case: if the guide handle is released, the unit only vibrates on the spot.

Compatec compaction display: it indicates when the maximum compaction has been achieved with the unit. Learn more at: www.wackerneuson.com/compatec

No documentation requirement: hand-arm vibrations (HAV) are below 2.5 m/s² thanks to the vibration-reduced center pole.

	DPU40	DPU45	DPU6555
Performance (kN)	40	45	65
Weight (kg)	383	385	480–527
Engine type	Diesel engine		

* Models optionally also available with gasoline engine (BPU)

Heavy-weight reversible vibratory plates > 600 kg.

The heavyweight reversible vibratory plates offer an uncompromisingly strong compaction performance with compact dimensions and a high level of operating comfort. Therefore, they are the compaction machine of choice for demanding compaction work such as road construction. The water-cooled engine provides reliable high performance. The product range consists of high-performance, heavy-duty vibratory plates with centrifugal forces ranging from 80 to 110 kilo newtons.

Safety

- Lockable machine hood; this way, all important parts, e.g. ignition lock, operating panel, fuel tank, and remote control, are protected from unauthorized access
- Starter Pin can be programmed individually

Efficiency

- High performance with compact dimensions
- The low overall height allows passage below transverse spindles in shoring
- The water-cooled engine offers reliable cooling even at high external temperatures

Maintenance

- The concept consisting of a two-piece hood, protective frame and side panels, enables individual parts to be replaced very affordably if damaged
- The high capacity of the air filter ensures long maintenance intervals and saves time and costs

	DPU80	DPU90	DPU110
Performance (kN)	80	90	110
Weight (kg)	756/771	756/771	813/830
Operating width (mm)	670/770	670/770	870/970

Comfort

- Low HAV (< 2.5 m/s²)
- The engine can be conveniently started at the push of a button
- Simple height adjustable center pole
- Intuitive guide handle with variable speed adjustment
- The control panel can be used in 12 languages
- Large tank, one filling is enough for a normal working day

Transport

- Large, easily accessible tie-downs and therefore less transport damage
- The sturdy, self-engaging center pole lock offers a very fast and reliable retainer for transport

Quality

- The vibratory plate is made of extremely sturdy, wear resistant materials
- The autostart ensures that the engine starts only at the optimum temperature

The Compamatic (accessories) combines the compaction control Compatec with a Telematics function. The compaction results of a machine can be tracked at any time from your desk in the EquipCare manager.

Compatec compaction control shows the operator when the best possible compaction has been achieved with this machine. This saves excess passes and time.

Strong performance for demanding compaction work in road construction.

Compamatic heat map for compaction control from your desk.

Heavyweight remote controlled reversible vibratory plates DPUr > 700 kg.

Sturdy and compact in design, the remote-controlled vibratory plates offer the same high compaction performance as the models with center pole. The convenient remote control with two joysticks allow the operator to work away from vibrations, exhaust emissions and noise pollution. The innovative control unit simultaneously controls forward travel and turning movement allowing the plate to be steered efficiently and precisely even on curves and around obstacles.

Transport

- Large, easily accessible tie-downs and therefore less transport damage

Maintenance

- The concept consisting of a two-piece hood, protective frame and side panels, enables individual parts to be replaced very affordably if damaged
- The high capacity of the air filter ensures long maintenance intervals. This saves time and expense

Efficiency

- Compamatic (optional) helps plan out construction site processes better, ensuring quality (see info page 26)
- The low overall height allows passage below transverse spindles in shoring
- The water-cooled engine offers reliable cooling even at high external temperatures

Quality

- Made of extremely sturdy, wear resistant materials
- The autostart ensures that the engine starts only at the optimum temperature

Comfort

- The engine can be conveniently started at the push of a button
- The control panel can be used in 12 languages
- Large tank, one filling is sufficient for 4 hours of long-term application

Safety

- Lockable machine hood; this way, all important parts, e.g. ignition lock, operating panel, fuel tank, and remote control, are protected from unauthorized access
- Starter Pin can be programmed individually
- Infrared remote control with many safety features ensures that the operator works away from noise and exhaust emissions

Weight (kg)	709/724	793/810
Operating width (mm)	670/770	870/970

Direction change while traveling: for clean turning of curves and a high compaction performance.

Intelligent proximity recognition sensor: the machine stops automatically when the minimum safety distance between the operator and the machine is less than 2 m.

Remote-controlled vibratory plate DPU130r.

The DPU130r is the most powerful vibratory plate in the market. With a centrifugal force of 130 kN and an operating width of 120 cm, it easily achieves the productivity of a 7 ton-roller – however, thanks to its lower acquisition and operating costs, it is much easier to transport.

Efficiency

- Precise control as a result of the fully hydraulic, variable exciter adjustment
- Only a few passes required, through high depth effect

Quality

- Autostart with pre-heat and warm-up phase
- The base plate is made of nodular cast iron (GJS700)

Comfort

- Control panel in 12 languages offers a wide range of comfort and diagnostic functions
- There is a large intermediate space between the upper mass and the base through which dirt and stones are transported outwards during operation
- The best service access – simply fold open the cover

DPU130r

Coupling set.

The coupling set is the ideal machine for crushed stone compaction in railway construction. It is light enough not to sink into the track bed and has a large operating width of three meters. Therefore, the entire track bed can be compacted with a few passes. The remote control allows the operator to work outside of the danger area, standing away from dust, exhaust emissions and noise pollution. The three-coupled DPU110 vibratory plates can also be uncoupled, therefore they can be used and transported individually.

Efficiency

- Unique operating width of 3m for the compaction of large areas
- The standard Compamatic helps plan out construction site processes better, ensuring quality (see info page 25)

Quality

- The vibratory plate is made of extremely sturdy, wear resistant materials
- The autostart ensures that the engine starts only at the optimum temperature

Comfort

- Engine start at the push of a button
- Control panel in 12 languages
- Large tank, one filling is sufficient for 4 hours of long-term application
- Large, easily accessible tie-downs

Safety

- The machine's protective hood can be locked; this way, all-important parts, e.g. ignition lock, operating panel, fuel tank, and remote control, are protected from unauthorized access
- Starter Pin can be programmed individually

Maintenance

- The concept consisting of a two-piece hood, protective frame and side panels, enables individual parts to be replaced very affordably if damaged
- The high capacity of the air filter ensures long maintenance intervals

DPU110

A low loader is not necessary: the DPU130r only weighs 1,200 kg and can be transported on a truck bed.

Excellent steering: continuous speed adjustment with simultaneous highest reaction speed.

Stable coupling: quickly and reliably connected with a few screws.

Trench roller RTSC3.

The Rt-trench roller with the infrared-remote control SC3 delivers proven compaction results with safe operation. The intelligent control unit works with an infrared signal with line-of-sight control. The articulated trench roller with sheepfoot drums has exciters located under the axle in each drum for efficient transfer of compaction energy to the soil, and thus excellent compaction results. The compaction of excavated material and subbases of foundations, roads and parking lots is the specialty of RT.

Efficiency

- Low center of gravity due to the positioning of the exciters under the axle
- Two-part drums allow convenient conversion from 82 cm to 56 cm drum width
- A patented third infrared-receiver eye on the upper side of the trench roller prevents losses of signal
- Articulated steering for 1.6 m turning radius
- Selection between high and low compaction force per infrared remote control

Maintenance

- The permanently lubricated exciter and drive systems are maintenance-free
- All other machine components are easily accessible thanks to the wide-opening hoods
- LED Ring: informs the operator about the operating and functional status of the machine
- On board display, shows all important service information

Safety

- Through the remote control, the operator is not exposed to any hazards even when compacting in the trench
- Anti-tip device: lock mode switches off the machine when the operating angle from side to side exceeds 45°

User safety: a proximity sensor between the operator and the machine automatically deactivates the machine within a range of 2 meters.

Walk-behind tandem rollers RD7.

The walk-behind dual-vibration roller, RD7, supplies excellent performance in both soil and asphalt compaction - thanks to the optimally integrated frequency and two vibration stages. At the same time, the roller is characterized by its ergonomically arranged operator controls, such as, the engine rpm control attached to the center pole.

Efficiency

- All control elements are located directly on the guide handle
- Speed adjustment for engine with three positions (off, idling, full throttle) directly on the center pole
- Two vibration levels for different subbases
- The variable protective cage concept gives the greatest possible flexibility

Comfort

- Ergonomic handle and travel lever with recessed grips
- Vibration-damped center pole with lowest HAV in the market (< 2.5 m/s²)

Maintenance

- Easy, tool-free access to all service points
- Good visibility of fill levels

Long center pole facilitates steering and turning, especially in small areas.

Full engine protection – RD7 with steel frame

Without engine protection

The variable protective frame concept gives the greatest possible flexibility, for different requirements and applications.

Tandem rollers RD18.

The RD18 is a compact and particularly agile roller of the 1.8 ton-class. Thanks to its 3-point-articulated joint, combined with a large drum diameter, it accomplishes a uniform compaction performance and a high-quality asphalt surface. A special feature of the RD18 is the unilateral drum support with offset drums, enabling precise compaction very close along edges and walls on both sides.

Transport

- Compact transport and storage dimensions can be achieved by folding down the ROPS frame

Performance

- Three-point articulated pendulum joint for even front and rear weight distribution

Comfort

- The work platform is vibration decoupled and ergonomically designed
- The compact design allows a good view of the drums at all times

Efficiency

- All RD and RC rollers have the same simple operating concept
- The compact design enables high maneuverability on narrow construction sites and thus faster work
- Operator panel with a language-neutral, graphical and thus intuitive interface

RD18

Tandem rollers with electric drive.

The electric rollers RD24e and RD28e with an operating weight of barely 2.5 – 2.8 tonnes and a drum width of 120 centimeters, are the all-rounders for the emission-free construction site. The rollers are powered by a powerful and proven lithium-ion battery that provides up to 3.5 hours of operating time. They are charged easily and quickly at any 230 V or 400 V plug receptacle and are thus versatile.

Performance

- A 23.4 kWh lithium-ion battery with integrated cooling concept, energy recovery from the system make the rollers highly efficient
- Efficiency increase in the vibration system from approx. 32% to approx. 84%
- Energy recovery from the system

Efficiency

- The maintenance-free synchronous motor offers high torque and constant power output in continuous operation
- Quick and easy charging at any 230 V/400 V plug receptacle
- Electro-hydraulic travel and all-electric vibration
- A fully electric vibration system ensures maximum efficiency at low operating costs

Environmental-friendliness

- Very low noise emissions for applications in sensitive environments
- Very low service and operating costs

RD28e

Tapered design: for an unobstructed view of the drum edges, the machine surroundings and the construction site.

Clear sided curb clearance allows flush rolling both right and left: thanks to the offset unilateral drum support; ideal for work along walls.

The maintenance-free synchronous motor not only impresses with its constant power output, it also enables a high peak load.

	RD24e	RD28e
Operating weight (kg)	2,385–2,525	2,595–2,755
Drum width (cm)	100	120

Tandem rollers RD24, RD28, RD40, RD45.

The rollers of the 2.5 ton- and 4 ton-class are compact machines for any construction site. With their three-point-articulated- pendulum joints, they always achieve even weight distribution with optimum maneuverability and driving stability. In this way, perfect and high-quality asphalt surfaces can be produced. The user benefits from the intuitive operation and the comprehensive view of the compaction area. Thanks to their compact dimensions, they can be used without any problems even in confined areas.

Efficiency

- All RD and RC rollers have the same simple operating concept
- The compact design enables high maneuverability on narrow construction sites and thus faster work
- Operator panel with graphical interface for intuitive operation
- The overhang over the drum edge first begins very far up so that, for example, compaction can also take place right up to the edge of higher walls

Performance

- The three-point articulated pendulum joint ensures an even distribution of the weight on the front and rear drums / tires

Transport

- With the ROPS frame folded down, the RD rollers achieve compact transport and storage dimensions

Comfort

- The work platform is vibration decoupled and ergonomically designed
- The operator has perfect all-round visibility. Fewer mirrors and no rear-view camera are required

Get started with the work quickly: self-explanatory display and joystick are intuitive to operate.

Safe working: good all-round visibility from the operator's seat – also of the drum and wheels.

Optimum view due to the laterally adjustable seat.

Easy radiator cleaning due to separately removable flap.

The advantages of the tandem and combination rollers in detail.

From the technical outfitting for the actual compaction work to the comfort features to the practical details for transport or maintenance: here you can see what all models have in common.

All RD models have three-point articulated pendulum joint.

Uniform compaction and high travel stability are the key advantages of the three-point-articulated-pendulum joint, with which all tandem- and combination-rollers, except RD7, are equipped. It provides a uniform pressure distribution on the tires or the drums, especially

when turning curves. In addition, it improves maneuverability and provides for maximum tipping safety and stability, even on uneven site conditions, e.g. coarse gravel.

Clearly arranged display.

Self-explanatory, intuitive to operate and clearly structured: the display of the rollers from Wacker Neuson is very user-friendly. This

way, operators can manage everything starting from the first moment –an important aspect for rental yards in particular.

High level of comfort for the operator.

All rollers are equipped as standard with a completely vibration-insulated operator's cab. In this way, the operator is optimally protected against vibrations. Additional safety is provided by steps for convenient entry, plenty of legroom and an operator's seat that can be individually adapted to weight and height. All rollers from Wacker Neuson except the RD18-80 have a laterally movable seat.

The best lighting.

Whether for work at dusk, at night or when cloudy: the rollers from Wacker Neuson provide sufficient light. Optional working lights can be attached to the ROPS- frame for the tandem-axle and combination models. Already included within the scope of the series: a rotating beacon with which the roller is permitted on public roads.

Standard fold-down ROPS (Roll Over Protective Structure).

The ROPS bar provides added safety. It can be folded to the rear as a standard. The roller achieves very compact transport dimensions in this way.

Simple maintenance.

All rollers are designed so that maintenance is taken care of with a few movements: this includes good access to the entire engine compartment as well as easy exchange of the air cleaner. This saves time and money.

Practical central lifting point.

The centrally located central lifting point allows for a horizontal raising and lowering of the machine. The roller is thus easily,

quickly and safely transferred. RD18, RD24 and RD28 have a central lifting point.

**Tandem roller:
Front and rear with vibration drums.**

The vibration drum optimally brings the material to be compacted into oscillation with quick successive vertical forces. The built-in eccentric weight provides for a fast rotation and you achieve excellent compaction performance. Ideal for: all classic compaction work. Our tandem roller models are: RD18-80, RD18-100, RD24-100, RD28-120, RD40-130, RD45-140 and RD7.

**Combination roller:
Vibration drum in the front, tires in the rear**

The combination roller is equipped with only one vibration drum. The rear axle consists of rubber tires for pressing on the asphalt. This creates particularly high quality and smooth surfaces. Ideal for: asphalt compaction on sidewalks and bicycle tracks. Our combination roller models are: RD18-100c, RD24-100c, RD28-120c, RD40-130c, RD45-140c

Oscillation roller: vibration drum in the front, oscillation drum in the rear.

The oscillating movement is caused by a quickly changing forwards-reverse rotary movement of two masses in the drum. These forces are continuously directed into the ground in a targeted manner. At the same time, the vibration exposure is significantly lower than with a vibration drum. This also has a positive effect on the service life as well as the driving comfort of the machine.

Ideal for: compaction work in the inner city, near vibration-sensitive structures (e.g. bridges, residential buildings, historic buildings), on seams (hot to cold) and for minor repair work. Our oscillation roller models are: RD24-100o, RD28-120o, RD40-130o, RD45-145o.

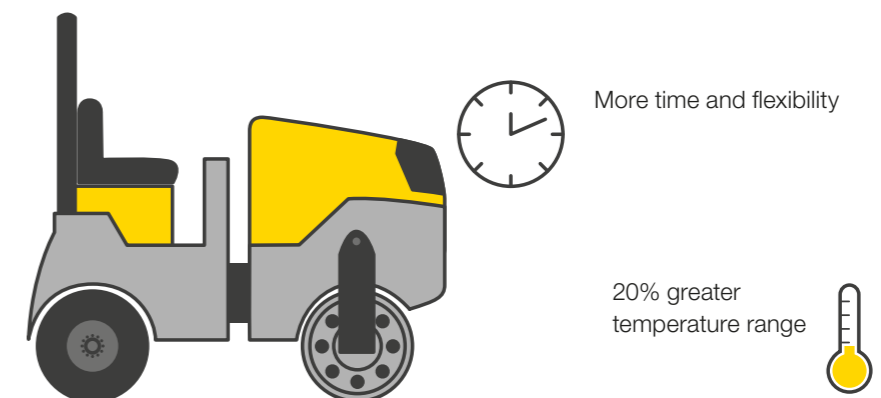

Operating mode 1:
Static in the front, oscillation in the rear

Operating mode 2:
Vibration in the front, static in the rear

Larger time frame, higher surface capacity:

With oscillation, you can also compact at low material temperatures. Compared to compaction with vibration you thus have a larger time window.

Single drum soil compactors RC50, RC70.

A perfect view in all directions makes working with the Wacker Neuson single drum soil compactors RC50 and RC70 safer and comfortable. Thanks to the compact design, the operator always has the working area and the drums in view from his seat. With a large departure angle and excellent gradeability, it is easy to maneuver even in uneven terrain. The simple operation via an intuitively designed display and joystick also make working easier and ensure that the operator is familiar with the machine in no time.

Efficiency

- Uniform operating concept for all RD and RC rollers prevents lengthy instructions
- Operator panel has a language-neutral, purely graphical and thus intuitive interface
- Due to the drive system with wheel motors, no axle is necessary as a connection between the wheels
- The low center of gravity combined with high ground clearance ensures good handling even on uneven terrain
- Eco-mode switch reduces the engine rpm (but also the compaction performance) and thus saves up to 20% fuel during transport trips

Performance

- Hydraulic traction control (automatic slip control) provides extremely good gradeability

RC50

RC70

Comfort

- The compact design allows a good view of the drums at all times and simplifies maneuvering and driving up to the walls
- The work platform is vibration decoupled and ergonomically designed

Maintenance

- The engine switches off automatically after a preset time, thus reducing operating hours and extending maintenance intervals

Eco-Mode for up to 20% fuel savings.

Traction control ensures that the wheels do not spin even on uneven terrain.

Master up to a 60% gradient: thanks to the powerful wheel drive.

The advantages of the tandem and combination single drum soil compactors in detail.

With the five compact tandem and combination single drum soil compactors, we have the right solution for you for various gradients, requirements and spatial conditions. In addition, the operator's cab can be outfitted to meet your individual needs.

The smooth drums of the single drum soil compactors - RC50, RC70 and RC70vo.

Due to the low depth effect, the smooth drum is ideal for applications in sensitive areas, e.g. Near vibration-sensitive structures like historic buildings or on surfaces under which tubes and utility lines run.

In addition, smooth drums are ideal for:

- Non-cohesive or weakly cohesive soils, such as sand and gravel
- Surfaces that have already been processed with a cleated (padfoot) single drum soil compactors

The cleated (padfoot) drums of the single drum soil compactors- RC50P and RC70P.

The trapezoid-shaped pads of a cleated drum compact the ground through kneading and crushing. The further the compaction progress, the less the pads sink into the ground.

The application areas of cleated drums are:

- Fine-grained soils with a high water content, incorporation of binding materials, such as lime or cement, into acidic soils
- Compaction of cohesive, less supportive moist ground, as well as friable soft stone (e.g. when building dams)

One single drum soil compactor, two types of compaction – RC70vo.

All tandem and combination drum rollers compact through vibration, but the RC70vo offers you a special extra: You can use it to choose between the vibration and oscillation operating modes.

Type of compaction 1:

Vibration for high compaction depth.

Type of compaction 2:

Oscillation for optimal surface compaction.

Three-point articulated pendulum joint.

The tandem and combination drum rollers are also equipped with a three-point articulated pendulum joint. It evenly distributes the weight on the drums and wheels. In addition, it also minimizes the tipping danger at a full steering angle and provides for consistently good compaction results.

In uneven terrain, the low center of gravity of the tandem and combination drum rollers provides for stable straight-ahead travel and safe maneuvering. The pendulum support in the joint protects the operator by damping the driver's cabin.

Uneven ground conditions, quiet cabin:

The pendulum support has a damping effect.

Tip-safe in curves:

Thrusting force distribution always in the green range.

Trench, tandem and combination rollers.
