VP2050A

Single direction vibratory plate

Compact all-rounder for every construction site

The vibratory plates of the VP series are particularly compact machines that are ideal for compacting asphalt and light mixed soils as well as for vibrating composite stone pavers. Typical fields of application are gardening and landscaping as well as road construction. Thanks to the specially shaped base plate, they are easy to manoeuvre and can therefore be guided effortlessly around stones and manhole covers as well as along kerbs, gutters and buildings. With the help of the wheel set (accessories), they can be moved to the desired location on the construction site without any problems and with little effort.

Highlights

- Low-maintenance design for low TCO
